Abstract (en)

[origin: WO03103692A1] Probiotic- and prebiotic-loaded zooplankton, such as *Brachionus plicatilis* and *Artemia nauplii*, are obtained by culturing zooplankton in the presence of the probiotics or prebiotics. Probiotics or prebiotics are loaded into zooplankton in such a manner as to maintain their viability and/or bioactivity. Zooplankton are cultured with free or microencapsulated probiotics and/or prebiotics, and used as a vector for probiotic and/or prebiotic delivery to larval and juvenile fish, and crustaceans. The survival rate in breeding larvae and juveniles can be remarkably improved by feeding the probiotic- and/or prebiotic-containing zooplankton to the larvae or juveniles.
