Abstract (en)

[origin: WO03090914A2] Machine for making hair dyes, of an oxidation type, in particular for hair dressers, comprising individual large volume vessels respectively for a concentrated primary blue color (1), a concentrated primary yellow color (2), a concentrated primary red color (3), an uncolored neutral base for thinning the concentrated primary colors (4), for a high volumetric number oxidating liquid (5), including hydrogen peroxide, as well as for a neutral base (6), i.e. without hydrogen peroxide for thinning the oxidating liquid, the vessels being coupled to delivery means (18) which can be finely metered and being controlled by a dedicated software-hardware system in which a plurality of different proportions of the individual components corresponding to respective hair dyes are stored. The possibility of successively storing further novel hair dye formulations is moreover provided.
