Abstract (en)

[origin: WO2004022256A1] The invention relates to a method for the production of structure components from an extruded profile, in particular made from, Al, Mg or the alloys thereof, whereby on exiting the die of the extruder (1), said profile is guided by one or more guiding tools (2), for the purpose of shaping the same as a straight or curved (rounded) profile and a terminal section is separated off by means of a separating tool and introduced in the hot state to a hot forming process (8) and one or more further processes by means of gripping tools.
