Abstract (en)
[origin: WO2004009389A2] The invention concerns a convertible car comprising at least one windscreen (5), one folding roof, and two front seats (3, 4); it further comprises a panel-shaped wind deflector (6) provided with a front edge (7) and a rear edge (8), said panel (6) extending from the trailing edge of the windscreen (5), over its entire width. The invention is characterized in that the deflector panel (6) is provided, in its median part designed to be located between the two front seats (3, 4), integrated means (12) designed to deflect an air stream towards the inside of the passenger compartment, so as to counter the formation of turbulent recirculation.
