Abstract (en)

[origin: WO2004009421A1] Disclosed is a torsion free brake shoe holder hanger for use in a truck of a railway vehicle. The torsion free brake shoe holder includes: an upper lever including an upper connecting section formed on the upper thereof and having a hanger connecting hole formed therethrough to be connected to a hanger bracket of a truck frame end beam by a pin, an insertion groove formed in the center of the lower end thereof, and a pair of connecting rings formed on both sides of the insertion groove and having an upper connecting hole formed therethrough, each upper connecting ring being placed at a state in which the upper connecting ring is located by 90 degrees with respect to the upper connecting section; a lower lever inserted between the connecting rings of the upper connecting section; a lower lever inserted between the connecting rings of the upper lever to be connected to the upper lever, and including a lower connecting ring formed on the upper end thereof and having a lower connecting hole formed therethrough, and a brake shoe connecting hole formed therethrough to be connected to the brake shoe, the lower connecting ring being placed at a state in which the lower connecting ring is located by 90 degrees with respect to the lower connecting section; and a pin fit into the upper connecting holes of the upper lever and the lower connecting hole of the lower lever for rotational motion.
