Abstract (en)

[origin: EP1394066A1] The present invention concerns a transport unit comprising a plurality of panels (1), said panels being stacked on support means (3), wherein the panels and the support means are retained by a wrapping foil (2), wherein at least one drain aperture (4) is provided in the portion of the wrapping foil where water accumulation is most likely to occur, and that the at least one aperture is provided by a treatment in the wrapping foil so that the aperture preferably is reinforced along the rim of the apertures and if there is an overlap of layers of wrapping foil these are joined together along the rim of the apertures. <IMAGE>
