Abstract (en)  
[origin: WO2004020311A1] An insulating material comprising a grain material (12) in an outer covering is described. Generally, the material forms a sealable bag for containing food, generally cooked food. The grain material is preferably wheat, and the bag is heatable in a microwave oven. The present invention provides an environmentally friendly and cost effective material for use in the insulation of food. Maintaining the temperature of the food not only makes the food more appealing to the consumer, but also prevents potentially toxic bacteria from replicating in the food, thus avoiding food poisoning by bacteria.
