Abstract (en)  
[origin: WO03091134A1] An apparatus (1) for removing a wrapping film (2) from packages (3) of objects, in particular of lids (4), which has an unusual capability to transfer the lids, free of wrapping film, whilst preventing them from overturning, comprises a transfer apparatus provided with a seat (36) for receiving the objects and movement means (38) for moving the objects along the seat, the movement means (38) being provided with a thrust element (39). Anti-bouncing and anti-overturning means (51) for the objects in the seat (36), in particular for the lids (4), operate by means of a magnetic force and are operatively connected to selective activation means so that the magnetic force is applied to the objects during a stage of movement to the seat (36) and remains active until the thrust element (39) comes into contact with the last of the objects.
