Abstract (en)  
[origin: WO2004023502A1] The invention relates to a method of disabling the keyboard keys of a command-emitting device. The inventive method is characterised in that it comprises repeated iterations of the following steps: the automatic disabling of at least some keys on the command-emitting device once a command has been sent and the cancellation of said key-disabling operation by means of a specific action on the command-emitting device. One such method can be used to disable the keyboard keys of a command-emitting device when said device is being placed in a pocket or bag.
