Abstract (en)

[origin: EP1535860A1] The valve has a stem (14) that is displaced from a closing position to two opening positions, in response to respective activating controls, such that a product is distributed under pressure from a pressurized container as per respective flows through two orifices (18b, 18c). The orifice (18c) is closed in one opening position and the orifice (18b) is closed in another opening position. An independent claim is also included for device to condition and distribute the cosmetic product.
