Abstract (en)
[origin: WO2004034839A1] The invention relates to a holder, for example for a laptop computer, comprising at least one first plate member for receiving or supporting the computer, as well as a support which is hinged to the first plate member, which support rests on the supporting surface with one edge, as well as adjusting means for adjusting the angle between said first plane and said supporting surface. The object of the invention is to provide a compact and lightweight holder for a laptop computer, which is furthermore built up of a minimum number of parts and which is very easy to adjust by the user. In accordance with a first aspect of the invention, the holder is characterized in that the external dimensions of the first plate member determine the external dimensions of the holder in the collapsed position.
