Abstract (en)

[origin: WO2004023968A2] The invention relates to a dishwasher, particularly for fitted kitchens, comprising a cabinet (10) provided with a front door (11) that closes the washing tub (18), inside of which at least one first spray arm (20) and one second spray arm (21) are mounted that wet the dishes placed in at least one rack (19). The washing tub is delimited at the bottom by a downward sloping surface (22) in order to guide the washing liquid into a shaft (23) serving to collect and drain the liquid. In order to provide the dishwasher with a substantial extension both in a horizontal as well as vertical direction, the first spray arm (20) is mounted so that it is essentially coaxial to the shaft (23), whereas the second spray arm (21) is mounted above the sloped surface (22) with the rotation axis being situated at a right angle to said surface.
