Abstract (en)
[origin: WO2004007002A1] An injection device comprising an incremental clicking mechanism providing the user with an indication of the number of doses being set. For handling different types of medicaments having different dose volumes in the same type of injection device it is beneficial to provide an additional clicking means which is easy changeable. In this way different dose volumes can be dispensed by the same type of injection devices simply by utilizing different clicking means. The clicking means is preferably a curved track provided between the dose setting member and a non-rotatable clicker element
