Abstract (en)
[origin: WO2004020062A1] A hoisting device comprises lifting means for taking in and paying out at least one group of lines (5) with an elongate hoisting element (10) on a free outer end. The hoisting element (10) serves to receive at least one stage fixture thereon. The hoisting element comprises a profile assembly of at least two elongate profiles (11, 12) which are substantially parallel to each other and which are mutually connected by at least one rigid intermediate body (13). The profiles (11, 12) are adapted on their outer end for coupling to a corresponding profile of a further profile assembly.
