Abstract (en)

[origin: WO2004022964A1] Motor vehicles of all types with various forms of drive have been known for some time. For the propulsion thereof, said vehicles regularly burn fluid fossil fuels, such as for example, derivatives obtained from crude oil, like diesel, petrol and similar, which may also be treated with additives. The application of said fossil fuels in motor vehicles causes various pollutants, such as for example, carbon monoxide, nitrogen oxide, carbon dioxide and particulates etc. The aim of the invention is to reduce at least one harmful component on burning fossil fuels of all kinds, keeping the applied technological complexity to a minimum. Said aim is achieved with the use of an information support of the ENERCON type in a vehicle, whereby the information support is preferably mounted at a close distance and/or with the largest possible surface and/or contacting with the motor block and/or fuel tank and/or fuel line and/or the air conditioning unit and/or another part of the interior of the motor vehicle.
