Abstract (en)

[origin: WO03095983A1] The invention relates to a method and device for taking indoor air samples. The aim of the invention is, while differing from the provisions of the prior art, to not only analyze indoor air but also to make it possible to promptly influence the same or at least to be able to promptly determine questionable concentrations of indoor air components in order to make appropriate prompt provisions possible. To this end, the indoor air sampling and the analysis are carried out in prompt and proximal succession.
