Abstract (en)  
[origin: WO2004027407A1] The invention relates to a portable measuring system which detects one or several analytes and comprises a container (1), a photosensitive electrode (3), and one or several light sources (2). The inventive measuring system is characterized by the fact that the light source (2) or light sources (2) is/are disposed inside the container (1), resulting in a compact, small, and modularly structured measuring system. Preferably, the photosensitive electrode (3) is arranged within the wall of the container (1) as a part thereof.
