Abstract (en)
[origin: WO2004025678A1] The invention relates to a switch comprising an operating rocker button (1) and at least one contact element (15) which can be actuated by a radial deflection of the operating rocker button (1). Said contact element can be actuated directly by the operating rocker button (1), or by the operating rocker button (1) by means of a transmission element (2). According to the invention, a locking function is provided by means of a projection (6, 7) on the transmission element (2) or the operating rocker button (1), which co-operates with an elastic element (12).
