Abstract (en)
[origin: EP1537844A1] Device comprises a base plate (1), a base (2) connected to the base and a platform (3) connected to the base so that the platform exerts a circular or elliptical movement about an axis lying outside the center of gravity of the platform during operation and experiences parallel displacement. Preferred Features: The platform has an ergonomic shape and is displaced in a circular or elliptical movement using a cam drive. Wheels (6) are used to transport the device.
