Abstract (en)
[origin: EP1537958A2] The pivot (2) has a spring-loaded pin (16) engaging the curved ends (3",4") of jaws (3,4). The jaws have flat inner faces (6,7), facing each other and parallel to each other. Rows of sockets (5) accommodate tool bits (8-8") and are displaced toward opposite sides of the jaw so that two rows of tools can fit together side-by-side. The free ends of the jaws (3',4') have flat end surfaces (13) so that the assembly can stand upright when the jaws are closed. A plug-and-socket arrangement (10) may hold the jaws in their closed position.
