Abstract (en)

A box includes a box body (31) and a cover (32), that is mounted slidably on an open distal end (350) of the box body (31) and that is formed with a pair of slits (322) and an elastic arm (323) between the slits (322). The elastic arm (323) has a free end (329) with a hook (325) that is elastically engageable with the open distal end (350) of the box body (31) so that disengagement of the hook (325) from the open distal end (350) of the box body (31) can be performed using only one hand. <IMAGE>
