Abstract (en)

[origin: EP1538255A1] The cover (1) forms at least one section of an outer wall, especially a rear wall, of the washer/dryer and forms at least part of a channel through which a flow of gaseous material passes. The cover forms a heating unit in which at least one heating element is integrated so as to be within the flow stream of a gaseous material when the washer/dryer is operating. An independent claim is also included for a method of assembling a washer/dryer.
