Abstract (en)

[origin: EP1538281A1] The method involves making the swimming pool walls of blocks (5) of insulating material cast in concrete. The top edge of the pool wall is formed by shaped blocks having vertically upwardly projecting arms (6) on the pool side to which a cross web (7) is attached horizontally. The finished element is then set to engage positively at least in part on the vertical arm below. Independent claim describes finished element where the horizontal section is adjoined on opposite side of indentation by a retaining arm (3) designed to fit positively on vertical arm of block. Independent claim describes swimming pool with finished part fitted on top edge to engage round vertical arm of block.
