Abstract (en)
[origin: EP1538287A1] Door outer handle comprises a lever (8) which gives way to prevent the door (2) being opened during a side impact as a consequence of a force acting between a housing part (4) and a handle hoop (6) and prevents externally acting forces acting on an operating lever (10). An independent claim is also included for a door outer handle closing device. Preferred Features: The lever consists of two parts (8a, 8b) connected together by a hinge. The handle loop is formed as an injection molded hollow part.
