Abstract (en)
[origin: US2006099024A1] A revolving case (1) comprises a base (2) mounted mobile in axial rotation relative to a tubular body (3). A slide (4) for receiving a product to be protected is movably mounted in the base, the base (2) comprises a guide (20) for driving the slide (4) in axial translation when the base (2) is axially rotated relative to the tubular body (3). The axial rotation of the base (2) relative to the tubular body (3) drives the slide (4) simultaneously in rotation and in axial translation relative to said tubular body (3). The height of the slide (4) and the height of the guide (20) are not greater than the external height of the base (2).
