Abstract (en)
[origin: WO2004023961A1] The present invention provides an apparatus for dispensing rolled sheet material, the apparatus including a housing defining an interior adapted to rotatably support rolled sheet material and having a dispensing opening sized to allow sheet material to be dispensed therefrom. The apparatus further includes a nip within the housing such as, for example, may be formed by first and second rollers. In addition, the apparatus includes a mobile roll support system adapted to support a roll of sheet material within the housing wherein the roll of sheet material rotates to dispense sheet material and further wherein the mobile roll support system and the roll of sheet material move toward the nip as sheet material is dispensed. Furthermore, the apparatus includes a sheet material dispensing surface proximate the dispensing opening, the sheet material dispensing surface comprising at least one protrusion.
