Abstract (en)

[origin: WO2004024206A1] A method of treating or preventing high-risk plaque is provided. The method may include applying to a medical device an effective amount of a composition comprising a sex hormone, anti-hormone, sex-hormone agonist, steroidhormone inhibitor/antagonist (partial or full), selective estrogen receptor modulator (SERM), or a combination thereof. The medical device may be inserted into an area of a living organism that is or has a propensity to be affected by high-risk plaque.
