## Abstract (en)

[origin: WO2004003179A1] This invention discloses methods and agents for modulating the differentiation potential and/or proliferation of preadipocytes. More particularly, the present invention discloses methods and agents for modulating a fibroblast growth factor (FGF) signaling pathway, especially the FGF-1 or FGF-2 signaling pathway, for treating or preventing adiposity-related conditions including, but not limited to, obesity, lipoma, lipomatosis, cachexia or lipodystrophy or the loss of adipose tissue in trauma or atrophic conditions.
