Abstract (en)
[origin: WO2004033778A1] A thread section of a weft thread (25) is held precisely ready for a receiving rapier in a feed rapier (1) on a rapier loom despite the effects of retarding forces and also deflections of said thread section through the head (55) of a receiver are compensated for, whereby the feed rapier is provided with a thread clamp (50) on the side facing the feed device for the weft thread (25), which releases on tension forces occurring in the thread section and permits a deflection of the thread section.
