Abstract (en)
[origin: WO2004007865A1] The object of this invention is a construction for mounting a stationary glazing outside the actual wall structure, this way a so called double frontal can be constituted, the function of which in addition to architectural function is for example to protect from the weather, reduce noise and prevent solar detriment heat. This objective can be achieved according to the invention by using element system purposed for making a double frontal, which system builds from skeleton element constructed e.g. aluminium profiles and from a glass element which is attached by means of hinges. An advantage of the frontal glazing opening outwards is the possibility to mount it near the actual wall structure and to attach it directly to it.
