Abstract (en)
[origin: WO2004005649A1] A resilient element for suspended flooring and a method for manufacturing a suspended floor. The resilient element (1) constitutes an installation element, the length of which substantially exceeds its width, and it comprises an upper structure (2) and a lower structure (3). Between the structures (2, 3) there are arranged first support means (4), which arrange the upper structure (2) and the lower structure (3) at a first height (H1) from one another. The second support means (5) are arranged on the opposite side of the lower structure (3) with respect to the first support means (4). The second support means (5) arrange the lower structure (3) at a first height (H2) from the structure beneath the structure.
