Abstract (en)

[origin: DE10241893A1] Method for compensation correcting of the position of angle markers on the incremental wheel (2) of an angular position or velocity sensor (1-4) for a combustion engine is based on measurement of actual angle marker positions and measurement of cylinder pressures during the combustion cycle. Matching pressure and angle positions are stored in a look-up table and the angle values are compensated based on comparison with ideal angle and pressure values. The invention also relates to a corresponding system.
