Abstract (en)

[origin: FR2843429A1] The control device for the lock mechanism module (10) comprises a cable (14) with proximal (14P) and distal ends housed in a sheath (18) with proximal (18P) and distal (18D) ends immobilized by two proximal (20P) and distal (20D) stops parts. The sheath ends are connected to the corresponding stop part by gluing. The distal stop part is provided with a part forming a sleeve fitting the proximal stuck end of the sheath. This part comprises an orifice forming a reception container for a mass of glue.
