Abstract (en)
[origin: WO2004003402A1] The invention concerns a spring (4) characterized in that it comprises two leaves (41, 42) linked together by at least one link (43, 44), at least one leaf including a convex part which is supported on the other leaf in at least one support zone (413, 414, 423, 424) upon its elastic deformation by pressure on its convex part to bring it towards the other leaf, the link being located outside said support zone.
