Abstract (en)
[origin: WO2004020989A1] The invention concerns a device for measuring (10) thermal performance of a given material (11), comprising a body (12) whereon is provided a temperature sensor (38) part of which at least is arranged in a specific measuring zone (13). The invention is characterized in that the sensor is covered with a first membrane (32) whereof the thermal characteristics are close to those of the skin of a human fingertip.
