Abstract (en)

[origin: WO2004027643A2] The invention relates to a system (1) and a method for updating information displayed on a client (9) in a process data-driven environment. An updating stamp (t) is provided along with information units (4) used for displaying process data of automation devices (10) in a browser (2) during collection thereof. The updating stamp is compared with an updating stamp (t+1) which is managed in a system (1) and is updated whenever new information is added for the respective information unit (4), the information being updated in the browser (2) if the updating stamps are not identical.
