Abstract (en)

[origin: WO2004027717A2] A compact currency handling system comprising a transportation mechanism including a facing mechanism. The device comprises an evaluation unit adapted to determine denomination of currency bills. The system is adapted to rest on a table top and output currency to seven output receptacles based on denomination. The bills in each output receptacle are commonly faced by the transport mechanism which is adapted to face bills flagged for facing. Faced bills and non-faced bills are merged to output the various output receptacles, wherein output is based on denomination of a bill.
