Abstract (en)  
[origin: WO2004023756A1] The invention concerns a system (S) for reciprocal multimedia exchange between at least a first terminal (T1) and a second terminal (T2), each terminal comprising: means (Ca1, Ca2) for capturing video images, means (Mic1, Mic2) for capturing sound, means (Ec1, Ec2, Ec22) for video image reproduction, means (HP1, Cq2) for sound reproduction. The terminals (T1, T2) are mutually connected through a telecommunication network (R) and are such that: each terminal (T1, T2) further comprises transmission means (Sc1, Sc2, Mic1, Mic2), connected to the capture means (Ca1, Ca2, Mic1, Mic2) of the terminal, capable of transmitting to the network video images and audio data to generate at least one video stream and one audio stream, each audio stream being independent of the others streams.
