Abstract (en)  
The glove has an elastic metal tensioning element (30) to fasten the glove to the hand or the underarm. The element is a spring clamp anchored with one end to the mesh of the glove. The other clamp end has a claw, and this can be hooked into one of several rings (33), which are positioned around the glove and have a larger diameter. The spring clamp is held on the glove when not tensioned by a fixing holder (35) formed by the mesh. The spring clamp is longer than the distance between a fastening point (32) for one clamp end, and the holder aperture (35b) at a distance to this point.

Abstract (de)  
An einem Schutzhandschuh aus einem Metallringgeflecht ist ein metallisches, quer zur Längserstreckung des Schutzhandschuhs angeordnetes federelastisches Spannelement (30) zur Befestigung des Handschuhs am Umfang der Hand oder des Unterarms des Benutzers vorgesehen. Dadurch, dass das Spannelement (30) ein Federspanner ist, der am Schutzhandschuh verankerbar ist, wird ein vielseitig einsetzbarer und den Hygieneanforderungen genügender Schutzhandschuh geschaffen, der bequem anzuziehen und zu tragen ist. <IMAGE>
