Abstract (en)

[origin: EP1541472A1] The device for the banding of objects (5) with a banding material (4) has a channel (6) for the forming of a loop (10) from the banding material, and a loop guiding means designed in such a way to move the loop into an upright position. The device also has an initiating means at at least one initiating point (20.1-20.3) which to begin a loop size reduction is equipped to transmit to a loop section positioned at the initiating point an impulse directed transversely to the length of the banding material and out of the plane of the loop.
