Abstract (en)

[origin: FR2863257A1] The cap has a stripping unit (6) that is delimited by two curved attenuating lines formed on a side of a disc (3). The lines are provided such that the unit (6) is disintegrated from rest of a cap to obtain two disc parts with size smaller than two halves of the disc. The disc has projections forming spacers to maintain lower surface of the cap at a distance from upper surface of the head of a bottle, on its inner side. The stripping unit is disintegrated from the rest of the cap to a part of the cap with increasing width from a tab (7), while pulling the tab from the cap.
