Abstract (en)

[origin: EP1541508A1] The device for the destacking of flat objects laid on a stack has a suction device (36) located above the stack support (10), and a pushing away device (56) with pushing components. The suction device and pushing away device are located at a fixed distance above the stack support, and the pushing components on their end face facing the stack support during the pushing away of an object (14) from the suction head (38) of the suction device have a stop (68) for the next object lifted from the stack (16) by the suction head.
