Abstract (en)

A control technique of an electric shedding device is characterized by setting conditions of one or more weaving elements, obtaining a torque restriction value of each electric motor (38) according to the set weaving conditions, and setting the obtained torque restriction value for each electric motor (38). This enables to avoid shortening of the life due to damage to driving parts of heald frames (36) or the electric motor (38) and to improve weaving property. <IMAGE>
