Abstract (en)
A stand 23 is made up of a rectangular container 3, which is divided into two sections 5, 7 by a diagonal surface. The diagonal surface is perpendicular to two transverse sides 11 situated opposite each other that extend in the longitudinal direction of the container and is at an angle with respect to the container's front 13 and top 15. <??>The sections 5, 7 can pivot with respect to each other about a pivot axis 17, which is situated on the top and is where the diagonal surface and the top 15 intersect. There are seats 25 in each section 5, 7 of the container situated on the diagonal surface. <??>The stand 23 is coupled to an additional stand by means of a separate stairway element 31. There is a door 35 in the other transverse side 33 of the container 3, which provides access to the space in the lower half 7 of the container 3. A toilet or a changing room, for example, may be situated in this space. <IMAGE>
