Abstract (en)

[origin: EP1541861A2] The fuel injection valve (1) has a transmission element (7) axially movable in a bore (4) installed between the valve actuator (2) and a leakage chamber (3). The transmission element has a first section (8) lying against the actuator and a second section (9) constructed as a protrusion facing the valve (5). A bellows (10) is fastened by a first end on the protrusion and by a second end fastened to the wall of the bore housing the transmission element, with encompassing sealing action in each case so that the bellows seals the actuator against the leakage chamber.
