Abstract (en)

An envelope of an image display device has a front substrate (11) and a rear substrate (12) opposed to the front substrate, and respective peripheral edge portions of the front substrate and the rear substrate are sealed together with a sealing layer (21) which contains an electrically conductive sealing material. An electrode (30) for energizing the sealing layer is attached to the envelope. The electrode is formed of an electrically conductive member, is in electrical contact with the sealing layer, and has a conduction portion (38) exposed to the outside. <IMAGE>
