Abstract (en)

[origin: WO2004030461A1] The invention relates to a method for producing objects, at least parts of which are a glossy brown. In a first step, an at least par-baked, dimensionally stable shaped body is produced, said body is treated as a dimensionally stable pre-product in a second step at least partially with lye. The intermediate product thus obtained can be sprinkled with a granular topping in an additional step. In the final step, the intermediate product is subjected to renewed thermal treatment, in order to brown the areas treated with lye and optionally reduce the moisture in its interior.
