Abstract (en)

[origin: WO2004017906A2] The present invention is directed to a method for preventing an increase in matrix metalloproteinase (MMP) activity or reducing MMP activity in a subject in need thereof by administering to the subject a therapeutically effective amount of a selective aldosterone blocker. More particularly, the present invention is directed to attenuating or preventing an increase in MMP activity comprising administering eplerenone, or derivatives thereof.
