Abstract (en)

[origin: WO2004026492A2] The invention relates to a support device (1) for receiving molecules (2, 2') having a chemical, bio-chemical or similar activity, with regard to organisms or phenomena which are undesirable, in favour of a desired phenomenon. The support device (1) is characterized by the fact that associated means (3) for ensuring entrapment in said support of at least part (2) of said active molecules (2, 2') are provided, while at the same time, the activity of the trapped active modules (2) is maintained. The invention also relates to a method consisting in ensuring the presence of active molecules (2, 2') in the support (1), in addition to a composition for carrying out said method and/or which can be associated with a support (1) with a view to obtaining a support device (1).
