Abstract (en)

[origin: WO2004029189A1] The invention relates to a method for dyeing anhydrous sodium carbonate and to the use thereof as aesthetic and detergent additive in detergent and cleaning agent formulations. Only water-soluble colorants are used in said dyeing method. This provides a great advantage in comparison with other methods working with organic solvents. A preferred variant of the inventive method deals with the utilization of powder colorants. Sodium carbonate is homogeneously dyed by means of said variant.
